

Practical 4

Aim: How to Install Windows 10 on the Raspberry Pi 4.

Hardware:

- **Raspberry Pi 4** (4GB or 8GB recommended, 2GB is possible but very slow).
- **Storage device:**
 - Option 1: MicroSD card (at least 32GB, Class 10)
 - Option 2 (better): USB 3.0 SSD (faster and more reliable).
- HDMI monitor, keyboard, mouse, power supply.
- Optional: **USB Ethernet adapter**

Steps:

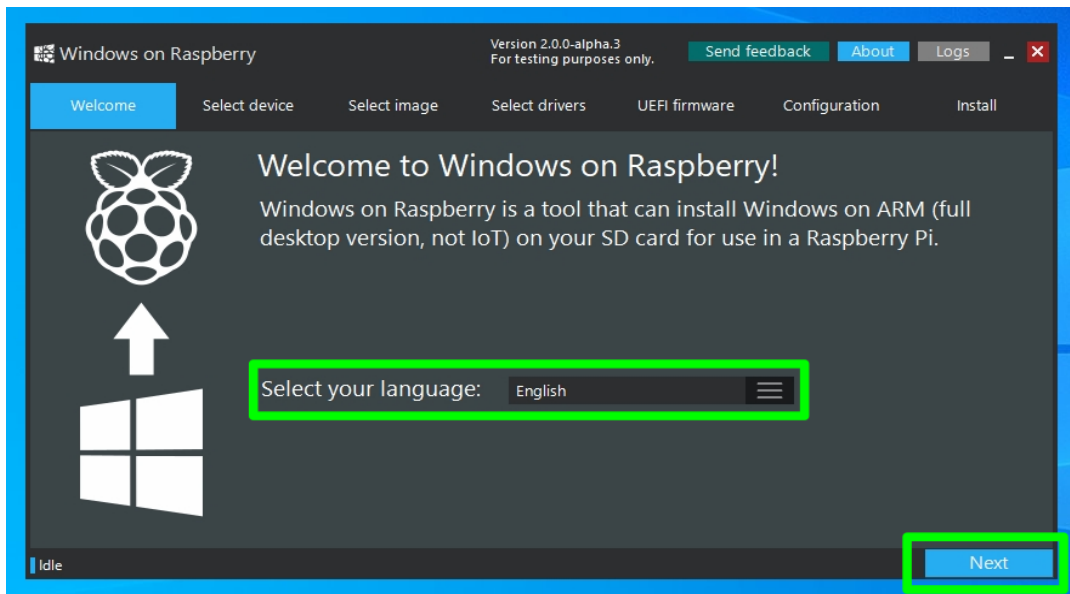

Step 1: Download the latest pre-release version of WoR tool
<https://www.worproject.ml/downloads> and extract the files.

Step 2: Prepare Windows 10 ARM64 ISO

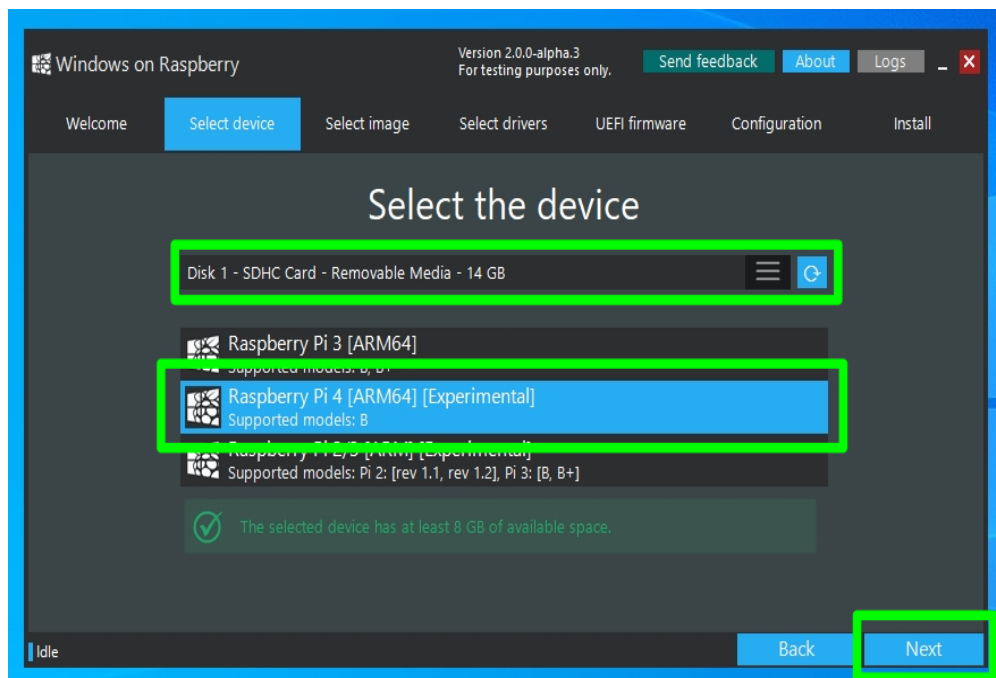

1. Go to **UUPDump.net**.
2. Choose **Windows 10 ARM64 build** (choose latest stable).
3. Download the script (zip file) and run it on your Windows PC.
 - It downloads required files directly from Microsoft and builds an ISO.
4. At the end, you'll have a **Windows 10 ARM64 ISO file**.

Step 3: Install WoR and Prepare the SD/SSD

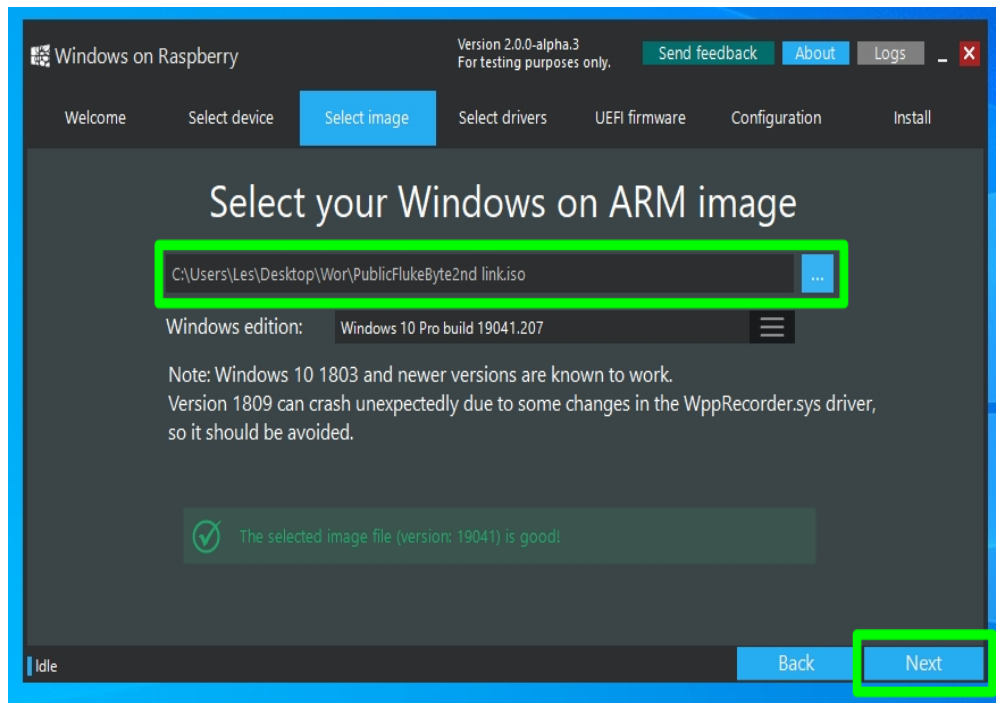

1. Insert your SD card or SSD into your Windows PC.
2. Open **WoR.exe** (run as Administrator).
3. Follow the wizard:

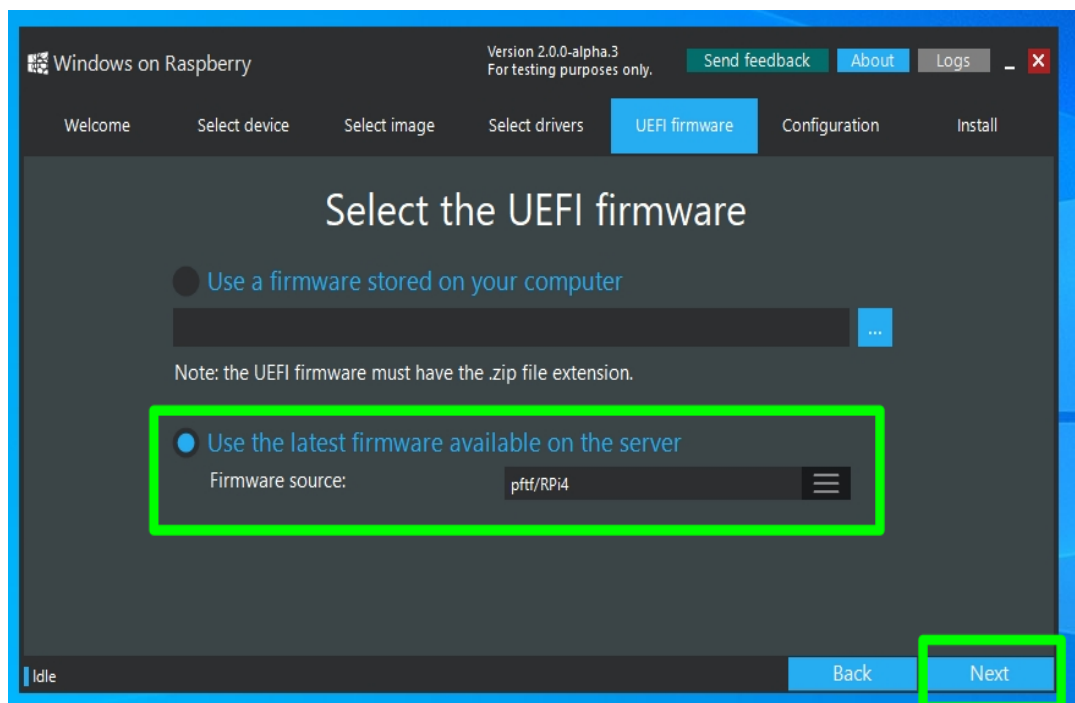

- **Step 1:** Select your device (SD/SSD).

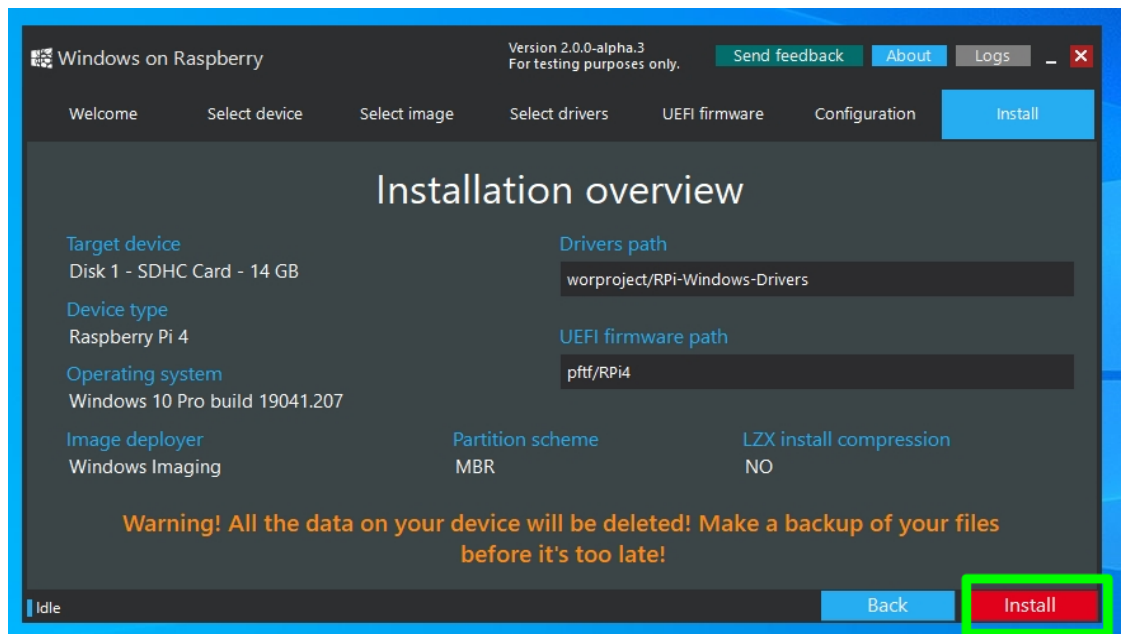

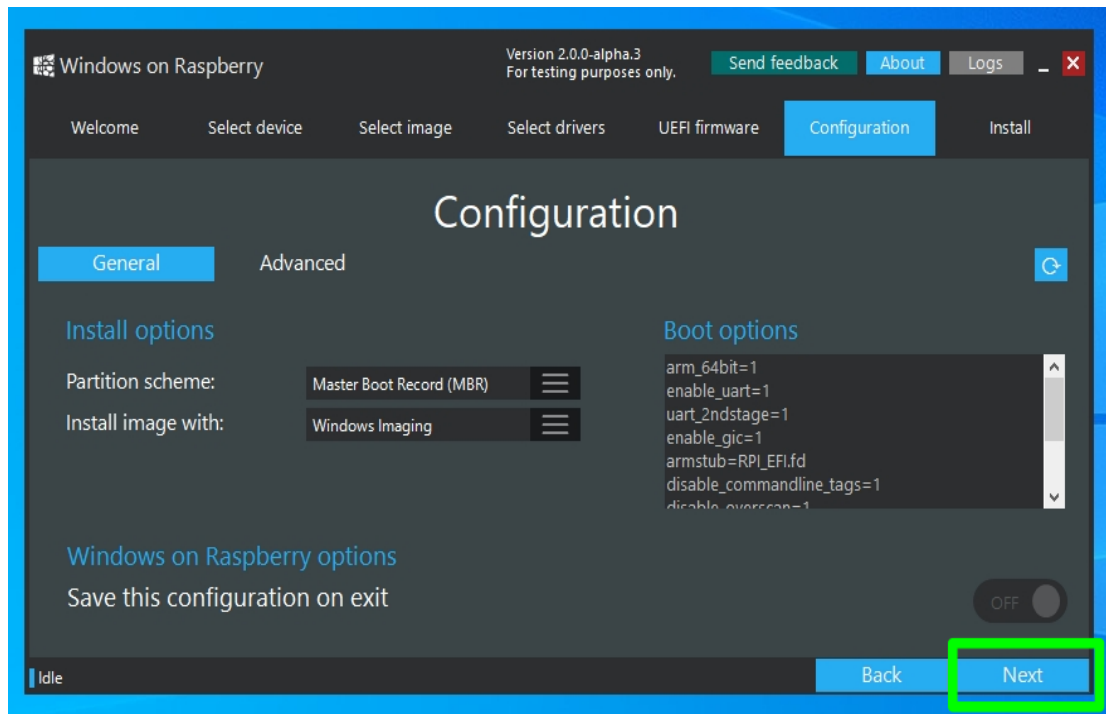

- **Step 2:** Point to your **Windows 10 ARM64 ISO**.

- **Step 3:** Select your device type: **Raspberry Pi 4**.
- **Step 4:** Provide the **UEFI firmware** and **drivers**.

- **Step 5:** Confirm installation settings.

4. WoR will now **flash the Windows image** to your device.
 - This can take **30–60 minutes** depending on storage speed.

Step 4: Booting Raspberry Pi 4

1. Insert the prepared storage into your Raspberry Pi 4.
2. Power it on → it will first load into the **UEFI firmware screen**.
3. (Optional but recommended):
 - Go into UEFI settings.
 - Change **Boot Order** to make your SD/SSD the first boot option.

- Save and reboot.
4. Now, Windows 10 setup begins.
 - Select language, region, keyboard layout.
 - Create or skip Microsoft account.
 - Configure system preferences.
 5. For network access, use a USB to Ethernet or a compatible WiFi dongle.
 6. Install Microsoft Edge by double clicking on the Microsoft Edge desktop icon.
